

ABSTRACT OF THE INVENTION

A mounting device and method for mounting an electronic toll payment pass to the interior of a vehicle's windshield. The device is comprised of a flexible support substrate having a face surface and a back surface. The face surface of the flexible support substrate is attached to the glass of the vehicle's windshield, wherein the flexible support substrate conforms to the curvature of the windshield. The electronic toll payment pass is connected to the back surface of the flexible support substrate in a manner that allows the electronic toll payment pass to be easily installed and removed by the driver of the vehicle. The flexible support substrate preferably contains a display image. The display image is visible through the glass of the windshield and obstructs the viewing of the electronic toll payment pass.
